CPU Definition: Attached Processor (AP) and Multiprocessor (MP) configurations sharing a single common memory and running under a single copy of an operating system are considered a single CPU. Multi-CPU configurations not sharing a single common memory and not running under a single copy of an operating system are considered separate CPUs.

Some products may not be available immediately or in all operating environments. Product availability and product specifications are subject to change. Operating environment support is subject to change, and support may vary among operating environments.

The license fee includes one set of media and installation materials.

Changes in hardware, operating system, or configuration may result in additional license fees.

Machine classification information is contained in "The SAS® System for IBM Mainframes - Machine Classifications" and "The SAS® System for Amdahl and Hitachi Data Systems Mainframes - Machine Classifications."
